Employees 56

Founded (year) 1992

As reliable and certified OEM service provider with long lasting experience we offer cost-efficient customer-oriented turn-key-solutions in the complex medical technology field: efficient product engineering, tailored hard- and software development, project management, preparation of risk analysis, documentation, CE and FDA certification support, international standard manufacturing and service.

BYTEC develops and manufactures medical devices serving the demanding areas of surgery, therapy and diagnostics.

Safety and technical functionality are prerequisite. These days however, clients call for products which are convincing in every aspect – among others usability optimization, ergonomic user-interfaces and designs which are aligned with their markets. We incorporate clinical processes into the workflow, thus realizing each element of a project under the banner “made in Germany”.
