<i>Website</i>	www.metek-mtk.de
<i>Employees</i>	18
<i>Founded (year)</i>	1984

Since 1984, metek has been developing and selling software solutions in medical technology. The business is specialized in the cardiology and hemodynamic measurement station DAVID. Besides an extensive range of performance spectrum, DAVID has many interfaces to x-ray equipment of all common producers. metek offers the entire range of hard- and software performance spectrum without using the help of contractors. Due to the fact, that metek has its own development department and because of continual training of its employees, metek has the technical lead in the area of cardiologic department systems. metek works closely with outstanding research and education facilities.

RWTH Aachen University with the university hospital, FH Aachen University of Applied Sciences and Forschungszentrum Jülich – just to name a few. They are excellent sources for technological developments at the highest international level.
