Founded (year) 2021

As the first platform-as-a-service provider, we offer the possibility to holistically perform care routines remotely and thus facilitate daily care. We achieve this by developing interfaces, which allow the orchestration of various smart home, smart sensor and smart care products. Leading individual solutions for remote care (e.g., in medication, hydration, fall detection, etc.) are centralized in one app and can be accessed and controlled by the caregivers. Our solution is manufacturer-independent and can be tailored in a flexible way to the respective care biography.

In order to provide direct contact with the care recipients, ELDERTECH includes a specially developed, age-appropriate video communication system. Care recipients receive a permanently installed tablet that serves as a means of communication. However, the active administration of the app lies with the caregivers.
