---

Wellow Srl is an Italian startup that patented a range of anatomical pillow. Mr. Franco Fontanesi, Company's founder, received the **European Invention Patent** for all the cushions in the Wellow range, an achievement which consolidates many years of work.

**The expertise consists of a solution that could combine prevention and treatment.**

The Wellow cushions **help to treat cervical and lumbar pathologies at home** (*Wellow Sleep*), **in the office** (*Wellow Work*) **and in the car** (*Wellow Drive*). By connecting a small appliance with miniaturized hi-tech technology, the cushions become a device for a **session of pulsed electro-magnetic therapy (EMTP)**.

The hard work of the founder and the efficacy of Wellow cushions were acknowledged with the awarding of the **bronze medal at the 18th International Exhibition of Science and Technology in Geneva**, the most important global-level market-fair.
