Employees 35

Founded (year) 1979

We have been developing, producing and distributing Intermittent Pneumatic Compression (IPC) systems for over 40 years. Our systems are used worldwide in the therapy of venous and lymphatic diseases. Another major field of application is the promotion of rapid regeneration in sports, especially in the high-performance sector.

In compression therapy, the applied pressure is comparable to the dose of medication. Our systems are the only ones that provide the exact desired pressure in a pressure-controlled manner. This makes us the technology leader in our field.

Our production site and sales headquarters have been in Aachen since the company was founded. We are proud of our complete and excellent compliance with all regulatory requirements. BÖSL Medizintechnik: Certified quality – made in Aachen.
