Employees 12

Founded (year) 2017

Fibrothelium is a technology start-up business derived from the RWTH university, located in Aachen, Germany. The core expertise consists of isolating highly biocompatible and bioresorbable proteins extracted from natural silk, strictly omitting toxic solvents while remaining thoroughly environmentally friendly. The thus obtained protein solution builds the backbone of the production chain: Further processing then allows for transformation of silk proteins into different shapes and functions, which in turn are incorporated in advanced biomedical engineering products, such as resorbable implants.
