---

IEM is a researcher, developer and manufacturer of validated medical products and services in the field of cardio-vascular screening, diagnostics and follow-up management. IEM develops its own product line as well as customized OBL products. As technology expert in Hypertension Management, IEM is known for the integration of pulse wave analysis algorithms into an ambulatory blood pressure monitor, allowing for the additional capture of central aortic blood pressure, aortic pulse wave velocity and further hemodynamic parameters. Besides the core product Mobil-O-Graph, a device for long-term blood pressure measurement with optional pulse wave analysis, IEM focuses on the interventional telemetry, which enables an efficient therapy and compliance management by the vital data collection from home.
